

Proxy settings for library services

To be able to use all the services that the SLU library offers you must configure the proxy settings in the web browser in your Mac computer.

Note that if you do these settings in Safari you might get problems when you wish to use that programme for "ordinary surfing" (without VPN connection to the SLU network).

We therefore recommend that you use Firefox when you wish to use the SLU network via VPN.

Configure proxy in Firefox by:

1. Start Firefox
2. Click Settings
3. Click Advanced
4. Click Network
5. Click Settings
6. Choose Manual Proxy Configuration
7. In the field Http-proxy type 130.238.98.89
8. In the field Port type 3128
9. Click OK
10. Close the dialouge box Advanced. Done!
